

SPARR⁺OW

SGM 5/31

FINAL STRETCH

- This week we have focused on improving robustness of our system, fixing bugs, and preparing for software demo
- We have been spent quite some time acquiring footage of the drone and the iOS client simultaneously; started early because this process is slow
- Wrapped up documentation tasks as per contract of deliverables
- Plan for software demo is to have one live demo in the middle of the fair, then for the rest of the time we will have iOS client hooked up to drone simulator as well as video demo

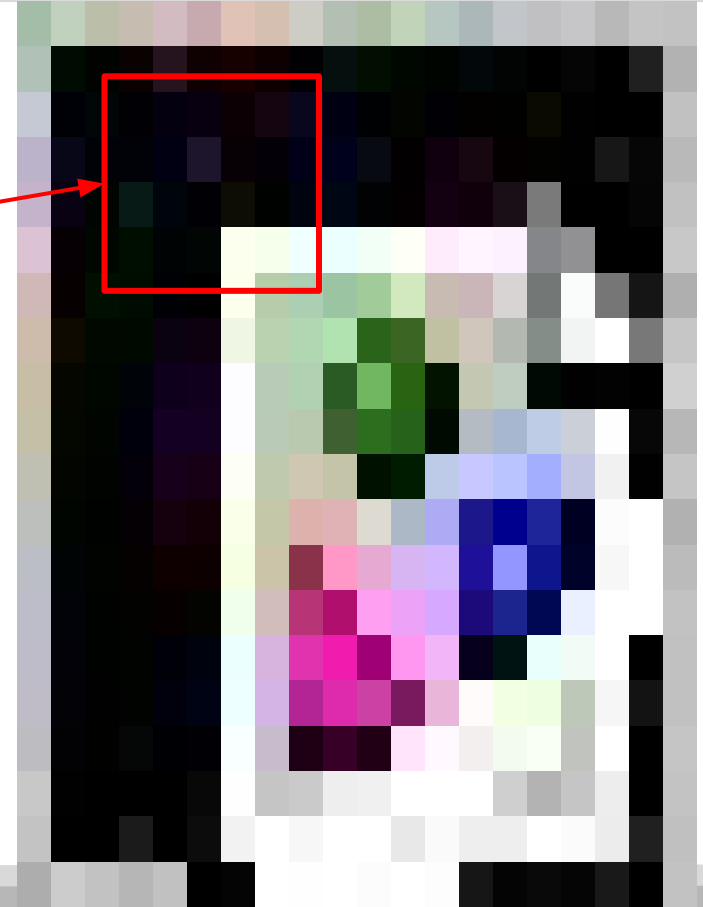

FINAL STRETCH

Drone Updates

- Enabled takeoff with our custom firmware!
- Erratic flight afterward due to accidentally having two sources of GPS (drone + Tango) since we were testing outside
- Have had to conserve propellers for our demo flights and screen recordings

QUESTIONS

- Should we have a poster for software demo?
- When can we expect to get reimbursements for spring break travel & for other purchases? Haven't gotten reimbursed for anything since March
