SGM 3/8

DEVELOPMENT OVERVIEW

Physically mounting tango on drone

Simple server for the tango to send location data to be logged

Application & path planning interface

Getting image stream for tango so barcodes can be read

Additional navigation logic, collision avoidance logic, and utility functions for manipulating Tango data

QUESTIONS

- Still haven't heard back from SAP about customer meeting days……

- Advice on jerryrigging Tango to drone?

- Can we get a separate "public" repo and have our current repo be where we have all our code/issues?

- Thoughts on development trajectory?
